NRC Report #: 866618

Action Information

Description: Less than one barrel of oil has been discharged. It appears that a piece of equipment is leaking, and the facility is actively looking for the leak. The oil is leaking into the ditch on RailRoad Avenue that drains into Morses Creek. Absorbent pads have been placed into the ditch to collect the oil, but small pockets of sheen are escaping into Morses Creek. Facility was visited by the USCG earlier today after the spill report was called into the NRC.
